

## Looking for Postdoctoral Researchers Marie Skłodowska-Curie Individual Fellowships Call (REF 2017/XXX)

### **Research Description**

---

An important and challenging problem in leukemia research is the limited ability for many laboratories to perform functional analyses of primary patient cells. In order to increase our understanding of the biology of human leukemic malignancies, we perform advanced experimentation using living-cell systems. Functional information extracted from single-cell analysis, provides crucial data to understand cell-to-cell heterogeneity. By enabling functional cytomics, we are able to evaluate the state of patients with leukemia as well as to examine the changes that occur in the accumulation of drugs into the cells over time. The Functional Cytomics Group is mainly focused in the basic mechanisms that regulate CD34+ and CD34- Side Population stem cells. Stem cells reside in most of tissues in a quiescent state, but rapidly become activated to both repair and regenerate the adjacent tissues. We are studying several genes involved in different aspects of stem cell activation, including some that encode for ABC multidrug resistance transporters, and others that regulate self-renewal and differentiation.

The current composition of the group includes 1 PI, and 3 PhD students.

Ongoing main research lines are 3:

- ✓ Study of the mechanisms by which ABC transporters differentially activates low or high-level transduction cell signaling: Potential role to both protect the stem cell compartment
- ✓ The use of anticancer drug libraries to study the reversal of multidrug resistance in Side Population leukemic stem cells
- ✓ Design of consensus protocols for safety, quality and standardization of CD34+ cells after-thawing

### **Main Responsibilities:**

---

We are looking to receive the CVs of postdoctoral researchers willing to apply to the Marie Skłodowska Grants with us.

During the preparation of the proposals the supervisor, the fellow and the Research Support Unit might be invite other research staff to train the fellow in some research areas not covered by the group. The main responsibilities of the Postdoc will be described in the MSCA proposal and will be jointly set up with the supervisor (Dr. Jordi Petriz).

## Requirements:

---

All suitably qualified candidates irrespective of gender or nationality are welcome to apply as long as the following conditions have been fulfilled:

- Applicants should be high motivated to work in the field of leukemia, stem cells, leukemic stem cells and functional flow cytometry.
- Applicants should have good knowledge of English, both written and oral.
- Experience in flow cytometry and hematological malignancies is needed, basic background preferred.
- The researcher must be an Experienced Researcher: s/he must, at the deadline for the submission of proposals, be in possession of a doctoral degree or have at least four years of full-time equivalent research experience.
- **Full-Time Equivalent Research Experience** is measured from the date when a researcher obtained the degree which would formally entitle him/her to embark on a doctorate, either in the country in which the degree was obtained or in the country in which the researcher is recruited, irrespective of whether or not a doctorate is or was ever envisaged.
- The researcher must **move or have moved** (transnational mobility) **from any country to the MS or AC** where the beneficiary is located.
- The researcher must comply with the **mobility rule**: Only available to candidates who have not been resident in Spain for more than 12 months in the past three years
- More information regarding the MSCA Call at:

<http://ec.europa.eu/research/participants/portal/desktop/en/opportunities/h2020/topics/msca-if-2017.html>

## What we offer

---

- Full equipped lab and access to all core facilities necessary for this project.
- Young and dynamic environment.
- Salary: see the Marie Curie rates for Spain. These rates are a gross EU contribution to the salary costs of the researcher. Consequently, the net salary results from deducting all compulsory (employer/employee) social security contributions as well as direct taxes (e.g. income tax) from the gross amounts (depending of the family situation of the fellow the grant might change the final salary).

## How to apply:

---

Interested applicants should send their CV (containing the contact details of two to three referees) and a motivation letter: [rrhh@carrerasresearch.org](mailto:rrhh@carrerasresearch.org) with copy [jpetriz@carrerasresearch.org](mailto:jpetriz@carrerasresearch.org)

**PLEASE PUT THE REFERENCE in the subject of the mail or your application may not reach the right person.**

**Deadline for applications: XXXX**

**Deadline MSCA: 14/09/2017**

### Josep Carreras Leukaemia Research Institute (IJC)

The mission of the IJC is to carry out research into the basic, epidemiological, preventive, clinical and translational aspects of leukemia and other hematologic malignancies.

The laboratories of the institute are on three campuses: the ICO-Germans Trias Campus on the Can Ruti Campus in Badalona; the Clinic-UB Campus in the University of Barcelona Faculty of Medicine on the Hospital Clinic campus in Barcelona and in the future on the Sant Pau Hospital Campus in Barcelona.

The legal address of the IJC is Muntaner 383, 3rd 2nd / 08021 Barcelona but CHECK which campus this job is located on.

T. +34 93 557 28 00 / F. +34 93 465 14 72 [www.carrerasresearch.org](http://www.carrerasresearch.org)

Registered in the Registre de Fundacions de la Generalitat de Catalunya with the reference number: 2674. VAT Number/CIF: G-65454308

The IJC is an equal opportunities employer
